### **STC Mid-Year Immunizations Report Shows Value of a State Immunization System**

STC's public health state immunization systems mid-year report of registry statistics demonstrates the value of a state immunization system as a health data asset to support health information exchange and meaningful use. The report indicates that for 20% of the U.S., there are 20.9 million patient records with 164.1 million immunization records on line in state-of-the art data systems. There are 14,100 providers reporting records with 71,700 on-line users.

Of particular significance, there are currently 514 electronic links supporting immunization record exchange through electronic medical records (EMRs) or health data system exchanges including state-to-state record sharing.
